43	Grade and staple of upland cotton ginned, by districts, in North Carolina and Oklahoma	48
44	Grade and staple of upland cotton ginned, by districts, in South Carolina and Tennessee.	50
45	Grade and staple of upland cotton ginned, by districts, in Texas	52

Cotton Quality - United States

1962 Crop

Introduction

The quality of cotton ginned in the United States from the 1962 crop is presented in this report. These quality estimates are based on the classification of samples representing approximately ten percent of the 1962 cotton crop. The sample distribution of the various qualities was raised to total ginnings as reported by the Bureau of the Census for upland and American-Egyptian cotton.

Quality statistics on the 1962 crop for the major cotton producing states are presented in three groups of tables in this report. The first group of tables contains cross-class data on the grade and staple of upland cotton ginned by states from the 1962 crop. The second group of tables contains grade and staple estimates of state ginnings by specified reporting periods. Grade and staple estimates of upland cotton ginned by state districts are included in the third group of tables.

A report covering the qualities of cotton on hand August 1, 1963 by principal types of storage will be released in late September. In addition to quality estimates of cotton in the carry-over, this report will include quality data on the crop, supply and disappearance of upland cotton for the 1962-63 season with comparative data for preceding years.

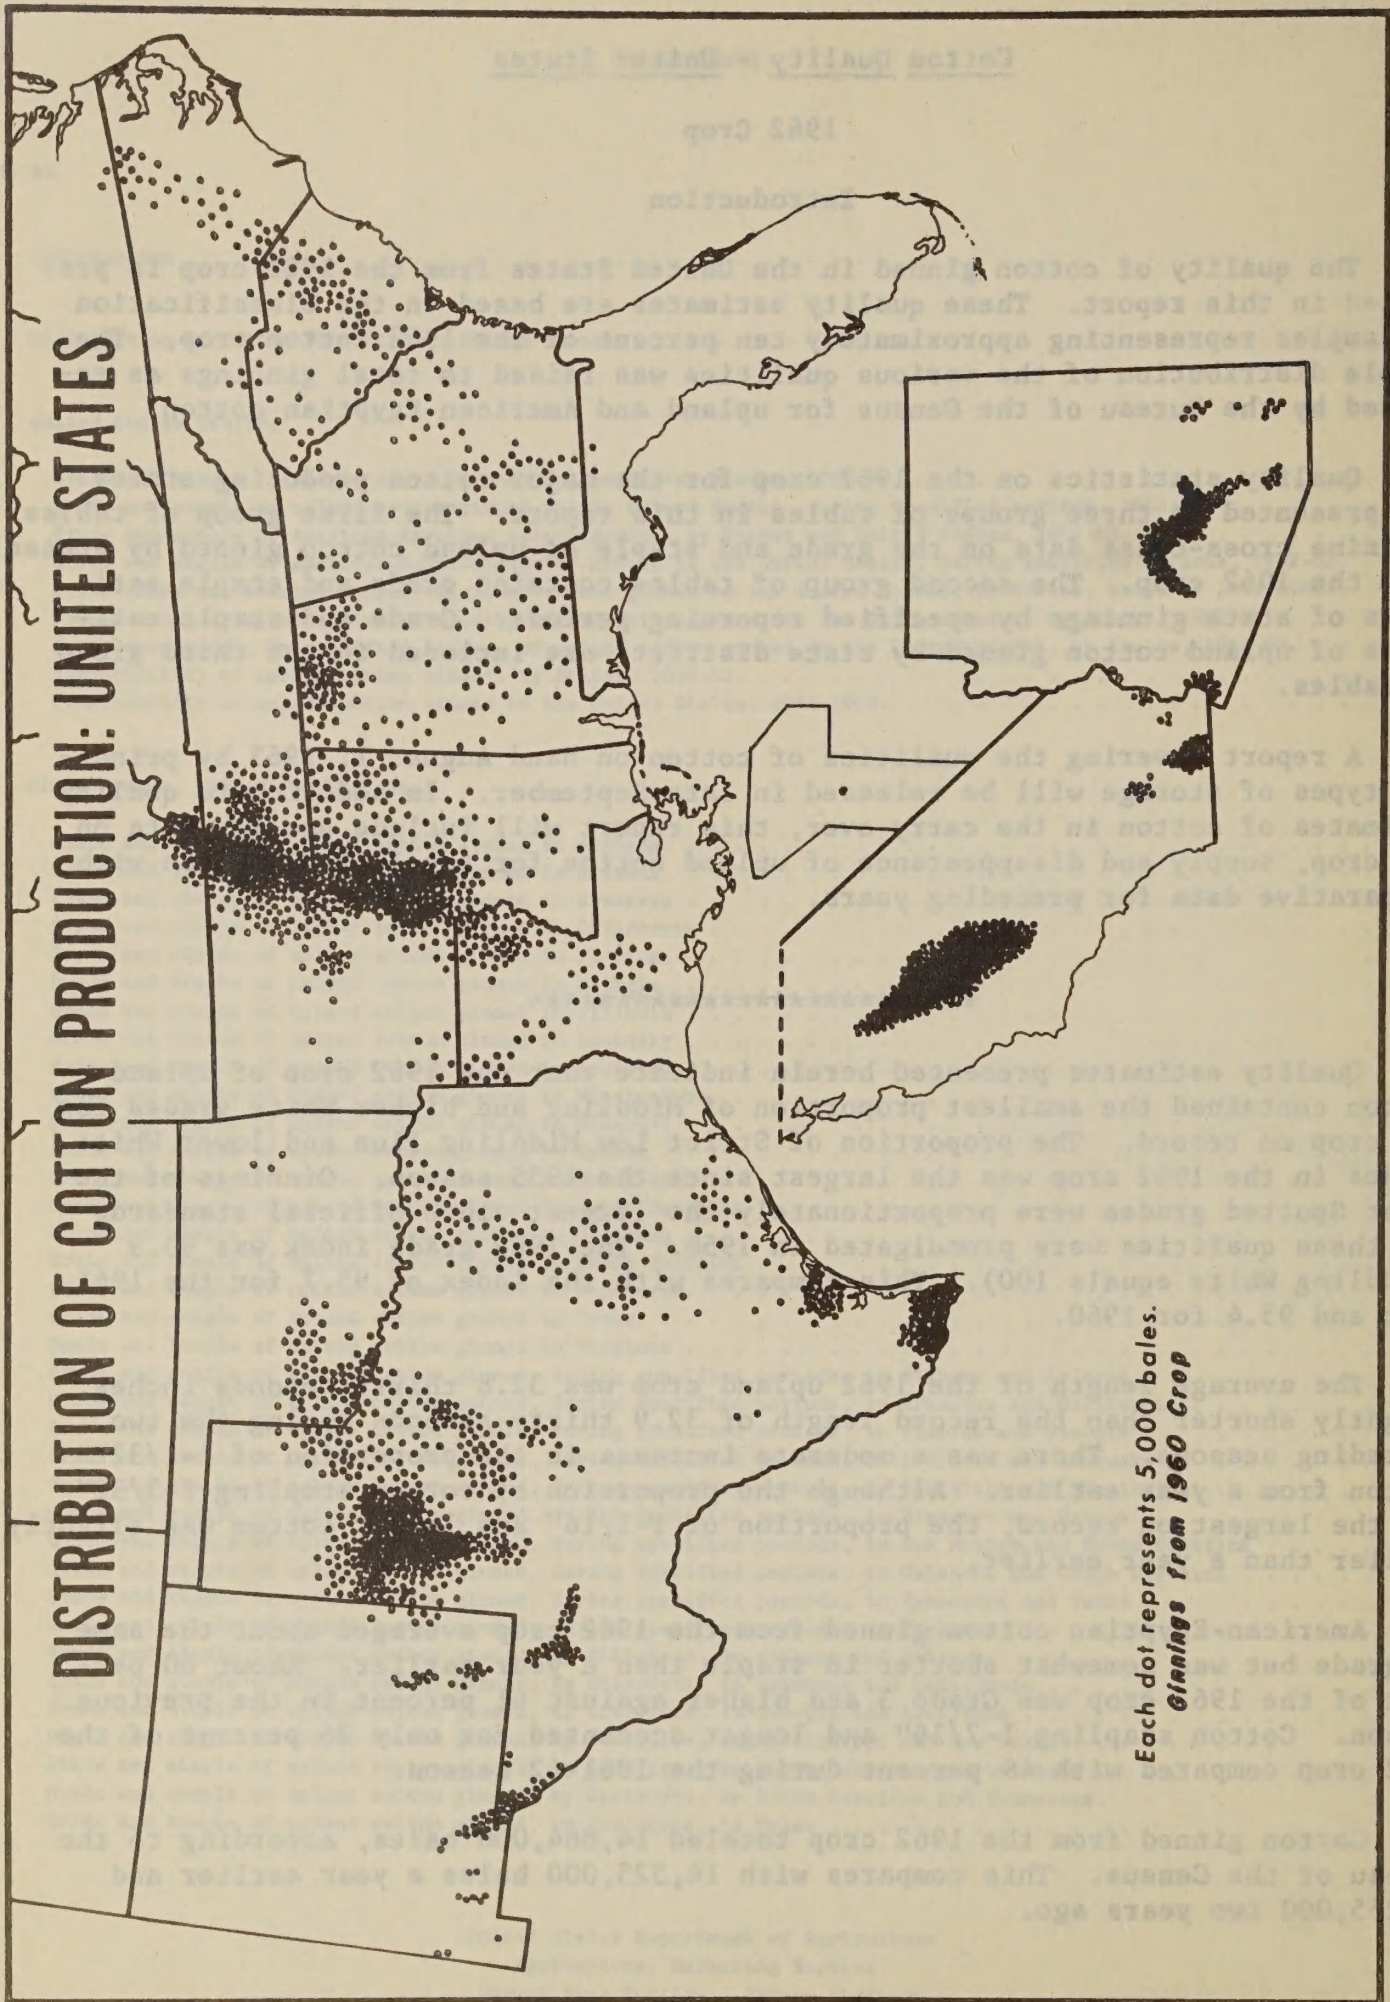

Quality estimates presented herein indicate that the 1962 crop of upland cotton contained the smallest proportion of Middling and higher White grades for any crop on record. The proportion of Strict Low Middling Plus and lower White grades in the 1962 crop was the largest since the 1955 season. Ginnings of the Light Spotted grades were proportionately the largest since official standards for these qualities were promulgated in 1958. The 1962 grade index was 93.9 (Middling White equals 100). This compares with the index of 95.7 for the 1961 crop and 95.4 for 1960.

The average length of the 1962 upland crop was 32.8 thirty-seconds inches, slightly shorter than the record length of 32.9 thirty-seconds during the two preceding seasons. There was a moderate increase in the proportion of 1-1/32" cotton from a year earlier. Although the proportion of cotton stapling 1-3/32" was the largest on record, the proportion of 1-1/16" and longer cotton was slightly smaller than a year earlier.

American-Egyptian cotton ginned from the 1962 crop averaged about the same in grade but was somewhat shorter in staple than a year earlier. About 60 percent of the 1962 crop was Grade 3 and higher against 61 percent in the previous season. Cotton stapling 1-7/16" and longer accounted for only 26 percent of the 1962 crop compared with 49 percent during the 1961-62 season.

Cotton ginned from the 1962 crop totaled 14,864,000 bales, according to the Bureau of the Census. This compares with 14,325,000 bales a year earlier and 14,265,000 two years ago.

DISTRIBUTION OF COTTON PRODUCTION: UNITED STATES

Each dot represents 5,000 bales.
Ginnings from 1960 Crop

1/ Computed by weighting the quantity in each grade by the 1937-39 average price per pound for such grade of 15/16 inch staple. Converted to an index with Middling White equaling 100.

2/ Averages calculated on numerical equivalents of the staple designations (for example, 29/32^W=29).

1/ As reported by the Bureau of the Census, running bales.

A map of the state of Arizona, divided into four numbered regions. Region 1 is in the north, Region 2 in the south, Region 3 in the east, and Region 4 in the west. Major cities and geographical features are labeled: Phoenix, Tucson, Flagstaff, Sedona, Prescott, Yuma, and the Colorado River. The map is oriented with North at the top.
